### Background Information

On June 15, 2009, Mariposa Energy, LLC submitted an Application for Certification (AFC) to the California Energy Commission to construct and operate an electrical generating plant in northeastern Alameda County, California. The proposed Mariposa Energy Project would be a natural-gas fired, simple-cycle peaking facility with a generating capacity of 200 megawatts (MW). The proposed Mariposa Energy Project would be located approximately seven miles northwest of the City of Tracy, seven miles east of Livermore, six miles south of Byron, and approximately 2.5 miles west of the community of Mountain House in San Joaquin County. The proposed project site in northeastern Alameda County is in an unincorporated area designated for Large Parcel Agriculture by the East County Area Plan. The facility would be located southeast of the intersection of Bruns Road and Kelso Road on a 10-acre portion of a 158-acre parcel (known as the Lee Property) immediately south of the Pacific Gas and Electric Company (PG&E) Bethany Compressor Station and 230-kilovolt (kV) Kelso Substation.

On August 26, 2009, the Energy Commission began review of the proposed Mariposa Energy Project. The Energy Commission has exclusive jurisdiction to license this project and is considering the proposal under the review process established under Public Resources Code section 25540.6. During the review period, the Energy Commission will determine whether the proposed project complies with applicable laws related to public health and safety, environmental impacts, and engineering requirements. The Mandatory Status Conference scheduled by this Notice is sponsored by the Energy Commission to inform the public about the project and to invite public participation in the review process.

The engineering and environmental details of the proposed project are contained in the AFC, which may be viewed at:
